

## Allstyle Composite Doors

Our Global composite doors are manufactured to your sizes using the latest technology to provide you with a new door that will enhance the appearance of your home and provide improved security.

Composite doors have been used extensively throughout the USA and much of Europe for many years. In the UK composite doors have been used by housing associations, house builders and local authorities for many years due to their low maintenance and hard wearing abilities.

The internal and external face of our composite residential doors are constructed from Glass Reinforced Plastic that is moulded with an embossed grain effect to replicate the appearance of traditional timber doors. This provides all the visual appeal of a wooden door but thanks to the latest technology the GRP door facings eliminate cracking, warping or the need for regular painting.

### HIGH SECURITY LOCKING

Fitted with a 'Sold Secure' multi-point locking system and Security key cylinder our composite doors are supplied with a choice of gold, chrome or black door furniture.

### SHIELDED CYLINDER AS STANDARD

As standard we fit a shielded 5 pin cylinder lock making it harder to be snapped by anyone trying to gain entry into your home.

For extra security you can upgrade to a 7 pin cylinder that is anti-jiggle, anti-drill, anti-pick and anti-extraction. Supplied with 2 keys, additional keys can only be cut with the registration card supplied.

## IS YOUR FRONT DOOR LOOKING TIRED AND WORN OUT?

Until recently, replacing your existing front or back door offered few options in terms of materials with the most economic choice being a upvc door fitted with a upvc door panel. Whilst the Door itself will usually have high security locking fitted the door panels are constructed by bonding vacuum formed upvc sheets to polystyrene or Styrofoam cores and whilst they can be reinforced security can be a concern.

As you can see from these images colour matching the door and panel can also be difficult.

so it's

Timber doors may look good when first installed but unless they are regularly maintained they can soon look tired and ugly. With normally only one locking point they are a dream opportunity for a casual intruder not just draughts and the weather that can easily find their way in.

## THE SOLUTION

Now you can replace your existing front or back door with one of our GRP composite entrance doors and you will be installing a door manufactured using the latest technology both in terms of manufacturing and materials. There are sixteen different styles of door to choose from and most are available in a choice of six different colours including one woodgrain finish.

## BENEFITS OF GRP

GRP(Glass Reinforced Plastic) has been used extensively in the marine industry since the 1940's because of its strength and weather resistance so what better material to use for the front of your entrance doors where security and weather proofing are most important.

## CHOICE OF SIX COLOURS

Our doors are available in six different external colours: Red, Green, Blue, White, Black and Light Oak. The internal door colour is always White so it will always complement your internal decorations.

The solid colours are pre-pigmented during the manufacturing process to ensure a permanent and even colour throughout the door skin. The Light Oak finish is a hand applied stain which provides depth to the woodgrain. Whatever the colour the final process includes a high gloss UV resistant film to provide a finished sheen that will look good for years to come.

## MATCHING HARDWARE

Your new composite entrance door is factory fitted with fully suited door furniture to your choice. You can choose gold, chrome or black finish for all the hardware so everything from knockers, handles, hinges and letterplates are a perfect match.

Gold finishes can often tarnish but our Hardex gold finish hardware has been toughened to withstand the harshest elements and remain fresh and good looking for years to come.

## BSI APPROVED

Tested to exceed current British Standards for water tightness, wind resistance and air permeability our doors will keep you protected in all kinds of weathers.

In fact, they have been awarded the BSI kitemark for weather rating, security rating and hardware performance so you know that you are getting the best value for your money.

### CHOICE OF GLAZING

Our doors are available with a choice of obscure double glazed sealed units or for something a little special you can choose one of our triple glazed decorative glass designs featuring traditional lead or zinc. Choose this option and your chosen artwork is encapsulated inside the sealed unit where it will remain fresh for years to come.

## MATCHING SIDE PANELS AND TOP LIGHTS

For high door openings we can supply a fixed top light above the door which will be glazed with the same obscure glass specified in your door. Using a dedicated composite transome bar the door and top light are manufactured as one unit providing natural sightlines.

For wider door openings your new entrance door can be supplied with matching side panels. Depending on your chosen door style and width your side panel may be manufactured from a matching composite slab or from upvc door profile.

## FULLY INSTALLED AND GUARANTEED

Your new Allstyle composite door is fully installed and guaranteed by your local Affordable Windows installer.
